Quantum Spin Liquids

Subhro Bhattacharjee

ICTS, Bangalore

Quantum spin liquids are canonical examples of quantum ordered phases that cannot be captured within the conventional paradigm of spontaneous symmetry breaking. I will discuss the physics of Quantum spin liquids--symmetry fractionalisation, their relation to symmetry protected topological phases and possible experimental signatures of quantum spin liquids.

Monday, Jan 29th 2018

04:00 PM (Tea/Coffee at 03:30 PM)

Auditorium, TIFR-H
