# Seminar

## Partnering for Innovation: TCS Contributions to Scientific Programs

## Vikas Kumthekar

### TCS, Pune

To deliver cutting-edge research, scientific organisations are increasingly collaborating with industry partners—not to replace domain expertise, but to complement it with the best practices related to quality, engineering and delivering the IT solutions.

Tata Consultancy Services (TCS), with its wide range of offerings spanning research and innovation, systems engineering, and IT solutions, has been an industry partner on multiple scientific programs, including SKA, ITER, and uGMRT. Over the last decade, TCS has worked on developing next-generation, scalable, complex control system solutions for these programs.

In this session, TCS will present its work on these scientific initiatives along with its broader capabilities. The TCS team is keen to interact with TIFR scientists/ groups, understand ongoing programs, and explore opportunities for collaboration in delivering IT services that align with scientific goals. We will also discuss common challenges faced in industry–science collaborations and share how TCS has addressed them in similar contexts.

*Wednesday, Feb 18th 2026*

*14:30 Hrs (Tea / Coffee 14:15 Hrs)*

*Auditorium, TIFRH*
