Physical Review Materials: A Dedicated Venue for Advancing Materials Research

Hari Dahal

American Physical Society, MD

Physical Review Materials (PRMaterials) publishes high-quality research across materials science, serving a diverse community of materials scientists, physicists, chemists, engineers, and researchers in related disciplines. The journal provides a dedicated venue for original research spanning the prediction, synthesis, characterization, properties, and modelling of materials. By expanding the scope of the *Physical Review* family of journals, PRMaterials focuses explicitly on materials research, working in coordination with sister journals to address emerging gaps in subspecialty areas. This talk will introduce PRMaterials, highlight its unique role in the global materials community, and outline its peer-review process.

Tuesday, Jul 7th 2026

14:30 Hrs (Tea / Coffee 14:15 Hrs)

Auditorium, TIFRH
