Colloquium

There and back again

S Ravi Chandran

TCIS, Hyderabad

I will talk about my voyage to the Bay of Bengal on the R/V Roger Revelle. The ship primarily collected temperature, salinity and density data for the sea in the 3000 km along its travel path. We measured plankton density and collected sea water samples from different depths. A glider was deployed and recovered. There was also a team of biologists looking for marine mammals--whales and dolphins. I will talk about all this from the perspective of a non-oceanographer.

Wednesday, Jan 19th 2014

4:00 PM (Tea/Coffee at 3:30 PM)

Seminar Hall, TCIS
