The instrumentations should be capable of de novo sequencing, top-down proteomics, bottomsup proteomics, identifying and analyzing sequence tags, post-translational modifications, interacting proteins analysis, metabolites and lipids analysis. In addition to this, the system should be able to characterize, quantify, validate biomarkers and proteins using label and label-free techniques. The instrumentations must have latest technology to perform qualitative and quantitative analysis for all the aforementioned applications. The complete system quoted should have the following minimum specifications:

Nano-flow UHPLC system specifications
